Product description:

Modeline is a high-quality thermosetting plastic material. It is perfect for creating models and mock-ups. You can also make small accessories from modeling clay: clips, brooches, key rings. Models can be made by hand or by extruding patterns into molds. Hard modeling clay softens when exposed to the heat of the hand. Models should be hardened by baking in an oven at 100-110°C for 15-20 minutes. Finished models lubricated with vegetable oil acquire more vivid colors.

- Quantity: mix of 6 colors
