Product description:

ASTRA pulp is a plastic material with the consistency of a ready-made dough, well adhering to the surface of other materials. It is applied to the previously prepared structure in layers after the first one has dried - the next ones. After drying, the surface of the paper mass can be processed by carving, sawing, planing or grinding, e.g. with sandpaper.

Paper pulp allows you to create large, effective works on structures made of bottles, balloons, plates, polystyrene, branches, stones, cardboard, etc. It is also suitable for making small sculptural forms, such as: beads, medallions, bracelets, clips, reliefs, etc.

Finished products can be painted with ASTRA paints.

Size: 420 g
