Product description:

-
- Modeling clay is a high-quality thermosetting plastic.
 - Perfect for creating models and mockups.
 - You can also make small accessories from modeling clay: clips, brooches, and key rings.
 - Models can be made by hand or by squeezing patterns into molds.
 - Hard modeling clay softens due to the warmth of the hand.
 - Models should be cured by heating in an oven at 100–110°C for 15–20 minutes.
 - Finished models smeared with vegetable oil take on more vivid colors.
