Product gallery:

Product description:

- They have the shape of a cuboid with a hexagonal cross-section with an inscribed circle diameter of 12 mm and a length of 100 mm.
- They are used for marking wood in sawmills using optimization saws with vision cameras in order to cut out marked defects - knots, etc.
- The camera controlling the saw uses the principle of light reflection from the mark left by a crayon containing a fluorescent pigment.
- The crayon is not sharpened
